

OFFLINE · RAG (one-time)

- one-sentence domain spec
- retrieve standard text
- match built-in scaffold
- ground params (31 CFR)
- validate → rule base

ONLINE · Rust engine

- demand-driven skeleton
- agent event loop (Alg. 1)
- label at emission = intent

OUTPUT

- labeled temporal graph
- + ground_truth.json
- PyG · DGL · Neo4j

running example account 437

"structuring"
in the request

→ finance
scaffold

\$10k from
31 CFR

437 emits a
\$9,210 deposit

label =
structuring
